

## **DIAGONAL RETURN SCRAPER 8800**

### **DIAGONAL RETURN SCRAPER IN DURABLE POLYURETHAN -For reversible operation.**

The Diagonal return scraper is a sturdy and easy plough. It collects the waste material on one side of the conveyor and is excellent for reversible operations. The plough reduces the risk of damage, i.e. holes developing in the conveyor belt, and wandering belts or mistracking. It prevents material on the returning belt from entering between the return pulley and the belt.

The brackets of the diagonal plough are stable, easy to install and adjustable in height. Assemble the plough diagonally into the conveyor frame.

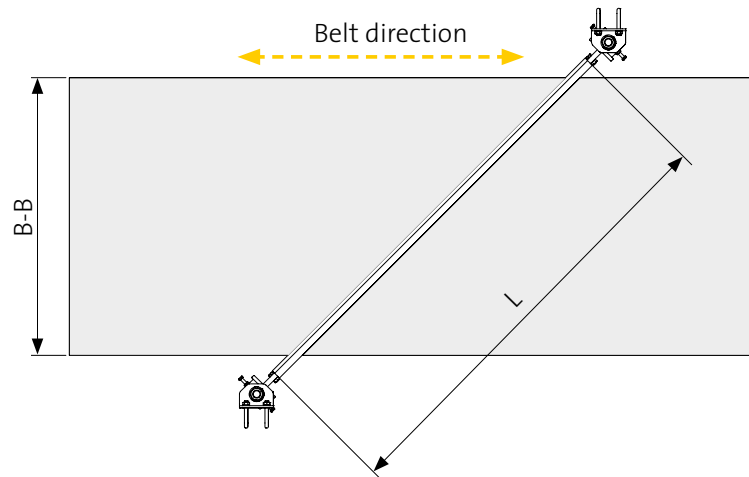

The scraper polyurethane list can be reversed when one side is worn out, but also easily be replaced with a new scraper list.

Diagonal return scraper 8400

- 1. PU-scraper (cut)
- 2. 2 pcs Holder PL1 9380
- 3. Flat iron

All steel parts are galvanized as standard.
